**Comment :**

Serum Iron was not reliable as the primary test to identify iron deficiency or screening haemochromatosis and iron over load disease . For this coditions TIBC ,Ferritin , and Transferrin saturation are recommended .  
Iron levels show diurnal variation .normal values in mid-morning .Low values in mid aftrnoon . very low values near mid night .  
Ingestion of oral contraceptives will elevate Iron and /or TIBC .

**IMMUNOLOGY**

| C-Reactive Protein (CRP) quantitative | Result | Unit | Ref. Range |
|---------------------------------------|--------|------|------------|
|                                       | 1.1    | mg/l | (<6.0 )    |

**Comment :**

CRP is a non-specific marker of inflammation and a variety of conditions other than atherosclerosis (e.g. SLE and Ulcerative colitis) may cause elevated concentrations.
